PROFILE

Passionate about Data Engineering, Machine Learning, and Software Development, I specialize in designing scalable data pipelines, implementing machine learning models, and building efficient backend systems. Proficient in Python, Scala, Java, SQL, and JavaScript, I leverage technologies like Apache Spark, Kafka, Hadoop, and Django to develop robust solutions.

EDUCATION

National Institute of Posts and Telecommunications <i>Data Engineering</i>	2023 – 2026
Math and Physics Preparatory Classes <i>Ranked 133/3200</i>	2021 – 2023

EXPERIENCE

Data Engineer Intern <i>4D</i>	Jun 2024 – Jul 2024
- Developed a flow-based programming (FBP) editor using React, TypeScript, Redux, and ReactFlow. - Optimized data processing workflows, improving efficiency and data handling.	

PROJECTS

Complete Predict Pro System | *Machine Learning, AI, React, Django, PostgreSQL*

- Built an AI-powered platform for player transfer price predictions, real-time match results, and GAN-based image generation. Developed with React frontend and Django backend.

Complete Medical Office Management Platform | *React, Tailwind CSS, Django, DRF, PostgreSQL*

- Developed a web platform for managing medical offices using React and Tailwind CSS. The backend, built with Django and DRF, supports clinic operations via PostgreSQL.

Job Recommendation System | *Python, Scala, MongoDB, Spark, Selenium, Docker, Django, React*

- Designed a job recommendation system with multi-source web scraping, OCR-based text extraction, and Spark-based data processing. Integrated Django Rest Framework and React for a seamless experience.

Image Classification: Real vs AI-Generated | *Python, TensorFlow, Keras, DRF, Docker*

- Trained a deep learning model with TensorFlow and Keras to classify real vs AI-generated images. Deployed as a REST API using Django DRF and Docker.

Real-Time Cyberattack Detection | *Kafka, Spark Streaming, PySpark, MongoDB, Django, React*

- Developed a real-time cyberattack detection system using Kafka for log collection and Spark Streaming for anomaly detection. Alerts are stored in MongoDB, exposed via a Django API, and visualized in React.

TECHNICAL SKILLS

Data Engineering: Apache Spark, Kafka, Airflow, Hadoop, Data Pipelines, ETL, HDFS
Machine Learning: Regression Analysis, NLP, Deep Learning (PyTorch, TensorFlow), Generative AI, Model Deployment
Programming Languages: Python, SQL, Java, Scala, JavaScript
Big Data Technologies: Apache Spark, Kafka, Hadoop, Hive
Databases: PostgreSQL, MongoDB, Cassandra
Developer Tools: Git, Docker, CI/CD
Data Visualization: Power BI, Matplotlib, Seaborn
Cloud Technologies: OpenStack, AWS (Basic Knowledge)

LANGUAGES

English: Fluent **French:** Fluent **Arabic:** Native speaker
