PROFILE

Passionate about Data Science, Machine Learning, and AI, I specialize in developing predictive models, optimizing data-driven solutions, and deploying scalable ML pipelines. With expertise in Python, SQL, and Scala, I leverage frameworks like TensorFlow, PyTorch, and Scikit-learn to build and fine-tune machine learning models. Experienced in data preprocessing, feature engineering, and model deployment using tools like MLflow, Docker, and Kubernetes. I have worked with big data technologies such as Apache Spark and Kafka, enabling large-scale data processing and real-time analytics. My goal is to bridge the gap between data engineering and machine learning to create impactful AI-driven solutions

EDUCATION

National Institute of Posts and Telecommunications | *Data Engineering* 2023 – 2026
Math and Physics Preparatory Classes | *Ranked 133/3200* 2021 – 2023

EXPERIENCE

Data Engineer Intern | *4D* Jun 2024 – Jul 2024

- Developed a flow-based programming (FBP) editor using React, TypeScript, Redux, and ReactFlow.
- Optimized data processing workflows, improving efficiency and data handling.

PROJECTS

Complete Predict Pro System | *Machine Learning, AI, React, Django, PostgreSQL*

- Built an AI-powered platform for player transfer price predictions, real-time match results, and GAN-based image generation. Developed with React frontend and Django backend.

Image Classification: Real vs AI-Generated | *Python, TensorFlow, Keras, DRF, Docker*

- Trained a deep learning model with TensorFlow and Keras to classify real vs AI-generated images. Deployed as a REST API using Django DRF and Docker.

Job Recommendation System | *Python, Scala, MongoDB, Spark, Selenium, Docker, Django, React*

- Designed a job recommendation system with multi-source web scraping, OCR-based text extraction, and Spark-based data processing. Integrated Django Rest Framework and React for a seamless experience.

Real-Time Cyberattack Detection | *Kafka, Spark Streaming, PySpark, MongoDB, Django, React*

- Developed a real-time cyberattack detection system using Kafka for log collection and Spark Streaming for anomaly detection. Alerts are stored in MongoDB, exposed via a Django API, and visualized in React.

Complete Medical Office Management Platform | *React, Tailwind CSS, Django, DRF, PostgreSQL*

- Developed a web platform for managing medical offices using React and Tailwind CSS. The backend, built with Django and DRF, supports clinic operations via PostgreSQL.

TECHNICAL SKILLS

Machine Learning: Regression Analysis, Natural Language Processing (NLP), Deep Learning (PyTorch, TensorFlow), Generative AI, Model Deployment, Model Optimization

Data Engineering: Apache Spark, Kafka, Airflow, Hadoop, Data Pipelines, ETL, HDFS

Programming Languages: Python, SQL, Java, Scala, JavaScript

Big Data Technologies: Apache Spark, Kafka, Hadoop, Hive, Flink

Databases: PostgreSQL, MongoDB, Cassandra, NoSQL

Developer Tools: Git, Docker, CI/CD

Data Visualization: Power BI, Matplotlib, Seaborn, Plotly

Cloud Technologies: AWS (Basic Knowledge), OpenStack

LANGUAGES

English: Fluent **French:** Fluent **Arabic:** Native speaker
