PROFILE

Passionate Software Engineer with a strong background in backend development, data engineering, and machine learning. Skilled in designing scalable applications, optimizing performance, and implementing efficient backend systems. Proficient in Python, Java, Scala, SQL, and JavaScript, with experience in frameworks and tools such as Django, Apache Spark, Kafka, and Hadoop. Adept at solving complex problems and delivering high-quality, maintainable code in agile environments.

EDUCATION

National Institute of Posts and Telecommunications <i>Data Engineering</i>	2023 – 2026
Math and Physics Preparatory Classes <i>Ranked 133/3200</i>	2021 – 2023

EXPERIENCE

Software Engineer Intern <i>4D</i>	Jun 2024 – Jul 2024
- Designed and developed a flow-based programming (FBP) editor using React, TypeScript, Redux, and ReactFlow, enhancing user interaction and modularity. - Optimized software workflows, improving data processing efficiency and system scalability.	

PROJECTS

Complete Predict Pro System <i>Machine Learning, AI, React, Django, PostgreSQL</i>
Developed an AI-powered platform for player transfer price predictions, real-time match results, and GAN-based image generation. Built a scalable system with a React frontend and Django backend.
Medical Office Management Platform <i>React, Tailwind CSS, Django, DRF, PostgreSQL</i>
Engineered a full-stack web platform for managing medical offices, optimizing appointment scheduling and patient record management. Implemented a secure and responsive UI with React and Tailwind CSS, backed by Django and PostgreSQL.
Job Recommendation System <i>Python, Scala, MongoDB, Spark, Selenium, Docker, Django, React</i>
Designed and deployed a job recommendation system with multi-source web scraping, OCR-based text extraction, and Spark-powered data processing. Integrated Django Rest Framework and React for a seamless user experience.
Real-Time Cyberattack Detection <i>Kafka, Spark Streaming, PySpark, MongoDB, Django, React</i>
Developed a real-time cyberattack detection system leveraging Kafka for log ingestion and Spark Streaming for anomaly detection. Designed a robust data pipeline, with alerts stored in MongoDB, exposed via a Django API, and visualized in React.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, SQL, Scala
Software Web Development: React, Redux, Tailwind CSS, Material-UI, Django, Django Rest Framework (DRF)
Backend API Development: RESTful APIs, GraphQL, Microservices Architecture
Databases: PostgreSQL, MongoDB, Cassandra
Big Data Streaming: Apache Spark, Kafka, Hadoop, Hive
DevOps Cloud: Docker, Git, CI/CD (GitHub Actions, Jenkins), AWS (EC2, S3, Lambda), OpenStack

LANGUAGES

English: Fluent **French:** Fluent **Arabic:** Native speaker
